

Underground power installation along Guger Street - Final phase.

PROJECT UPDATE JAN 2009

Western Power has been commissioned by Claremont Village Joint Venture and the Town of Claremont to assist with the renewal of the Claremont shopping precinct.

The work so far

In mid 2007 a portion of the overhead powerline was relocated from the south side of Guger Street to the north side of Guger Street. This work was completed to enable construction to commence on the Claremont Village project.

In October 2008 a 585 metre section of underground cable was installed along Guger Street. This work was finished ahead of schedule. In mid December Western Power installed two steel transition poles along Guger Street

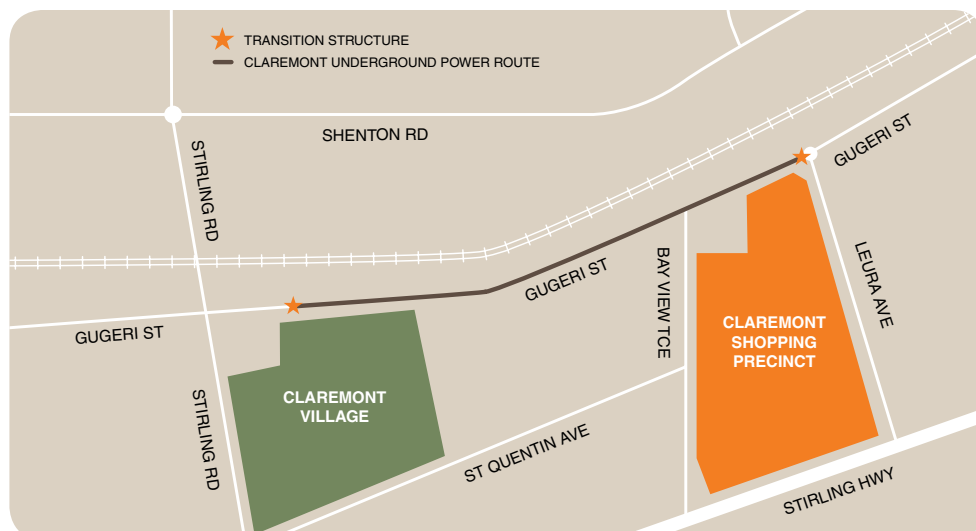

(see figure 1). One structure is located at the intersection of Guger and Leura Avenue and the other near the intersection of Stirling Road and Guger Street.

What's next?

From mid January to mid March Western Power will begin the final phase of the project when the new underground cable is connected to the overhead network. Once the underground cable is connected to the network Western Power will remove the existing designated poles and lines permanently transforming the appearance of Claremont. Western Power managed this work on behalf of the Town of Claremont and the Claremont Joint Venture. Western Power thanks the community for their patience during this work and look forward to working with the Town of Claremont community again in the future.
