1. Executive Summary

The purpose of the Annual Reliability and Power Quality Report (**Report**) is to present the performance of the Western Power Network (**Network**) in accordance with Schedule 1 of the *Electricity Industry (Network Quality and Reliability of Supply) Code 2005 (Code)*, for the reporting period 1 July 2024 to 30 June 2025 (2024/25 period).

1.1 Context

The Code, established under the *Electricity Industry Act 2004*, sets out supply reliability and quality standards for electricity network operators in relation to voltage fluctuations, harmonics, unplanned or planned interruptions, and complaints. Section 27 of the Code states that a transmitter and distributor of electricity must publish an annual report setting out the information described in Schedule 1 of the Code (**Schedule 1**).

1.2 Definitions

The terminology used in this Report is in accordance with the definitions presented in items 1 and 2 of Schedule 1. Item 2 of Schedule 1 requires the reliability performance measures to include, with no exclusions, all planned and all unplanned interruptions greater than one minute in duration irrespective of location, cause or circumstance, as seen by the customer.

For the purpose of this Report, the discrete area “all other areas of the State” as stated in item 2(c) of Schedule 1 will be referred to as “Other Areas” and will be specific to the network.

For clarity, the terminology used in this Report and item 11 of Schedule 1 have the same meaning, as set out below:

- Customer Average Interruption Duration Index (**CAIDI**) refers to item 11(a) of Schedule 1, i.e., “the average length of interruption of supply to customer premises expressed in minutes”
- System Average Interruption Frequency Index (**SAIFI**) refers to item 11(b) of Schedule 1, i.e., “the average number of interruptions of supply to customer premises”
- Average Service Availability Index (**ASAI**) refers to item 11(c) of Schedule 1, i.e., “the average percentage of time that electricity has been supplied to customer premises”
- System Average Interruption Duration Index (**SAIDI**) refers to item 11(d) of Schedule 1, i.e., “the average total length of all interruptions of supply to customer premises expressed in minutes”.

1.3 Performance summary

The standards prescribed in the Code require the reliability performance measures to include all interruptions, greater than one minute in duration, with no exclusions. The Code sets a higher standard of reliability performance than historically required under Western Power’s Access Arrangement as approved by the Economic Regulation Authority.

During the 2024/25 period, around 231,000 or 19% of customers on the network were affected for an average of nearly three hours per interruption during periods of inclement weather. However, the overall impact on customers due to inclement weather was less severe when compared to the 2023/24 period.

The Perth CBD performance was impacted by a fault at the CBD Hay Street zone substation during maintenance activity which affected 2,800 customers out of around 6,200 customers in the Perth CBD for 10 minutes.

There was overall improvement in the performance results for all indicators in Urban Areas (other than Perth CBD) and Other Areas for the 2024/25 period.

The overall Network recorded the highest impact from pole top fires in the 2024/25 period since records began in 2003. The impacts were severe and presented many challenges to Western Power field crews, as well as impacted customers.

Network performance was impacted during a number of significant weather events, as detailed below:

- 23 August 2024 - Over 20,000 customers were interrupted in the Goldfields and the Wheatbelt for an average of six and a half hours and nearly four hours respectively due to two trips of the 220Kv network.
- 24-25 January 2025 - Nearly 92,000 customers were interrupted for an average of nearly eight hours and 30 minutes, due to pole top fires.
- 19 February 2025 - Over 26,000 customers were without power for an average of 11 hours and 30 minutes, due to localised storm activity in the Perth Hills and surrounding areas.
- 4 March 2025 - Nearly 69,000 customers were interrupted across the Network for an average of nearly six hours, due to pole top fire activity.
- 13 March 2025 - Over 20,000 customers were without power for an average of three hours, due to microburst of lightning and strong winds in the Perth Hills and surrounding areas.
- 29 March 2025 - Multiple transmission line outages just prior to midnight during lightning activity, blacking out the Clarkson, Wanneroo and Yanchep substations affecting nearly 73,000 customers for an average of three hours.

The Stand-alone Power Systems (**SPS**) performance for 2024/25 shown in Table 9 now reflects the four-year average for the discrete area of SPS. SAIDI performance was within the standard of 290 minutes.

In addition to routine and targeted maintenance activities to improve reliability performance, Western Power is undertaking a targeted response to reduce the occurrence and impact of significant outages, as described in section 4 of the Report. This includes an accelerated program of capacity and reliability works for summer readiness with a focus on reducing outage risk and duration.

Also, a regional reliability improvement program was initiated in 2023 to undertake trials, consult with customers, implement improvements and develop a plan to improve regional reliability, using the capital allowance allocated for this purpose in Access Arrangement 5 (**AA5**). A four stage Regional Reliability Initiative Implementation Plan (**Plan**) has been developed, with full details in section 4.2 of the report.

2. Report structure

This Report is structured as follows:

- Section 3 provides the network Topology.
- Section 4 provides an overview of the challenges in the 2024/25 period and factors that have impacted the reliability performance of the Network. This section also provides an overview of the strategies and activities being implemented to improve the reliability of the Network.
- Section 5 (addresses item 4 of Schedule 1) reports on non-compliances with the provisions of the Code, including remedial action taken.
- Section 6 (addresses item 5 of Schedule 1) reports on the number of customers that experienced power interruptions exceeding 12 hours at least once during the 2024/25 period, or more than the number of times permitted by the Code.
- Section 7 (addresses items 6, 7 and 8 of Schedule 1) summarises the complaints which have been received, logged and subsequently actioned.
- Section 8 (addresses item 9 of Schedule 1) reports the payments made for not providing the required notice for planned interruptions and for supply interruptions that exceeded 12 hours (as required under sections 18 and 19 of the Code, respectively).
- Section 9 (addresses items 11, 12 and 13 of Schedule 1) provides discrete area performance data which is inclusive of interruptions on the Network greater than or equal to one minute that resulted in loss of power to customers.

Appendix A provides a list of interruptions that exceeded 12 hours, the length of the interruption and the number of customers affected.

3. Network Topology

The Network covers a geographic area from Kalbarri to Albany, and from Perth to Kalgoorlie (Figure 1) of 255,064 square kilometres (approx. twice the size of England). The distribution network, which consists of over 800 feeders, is connected to the transmission network at 156 terminal and zone substations. It provides an electricity supply to around 1,220,000 connected premises and over 292,000 streetlights.

The Network has a diverse asset base which includes 833,000 transmission and distribution poles and 105,000 circuit kilometres of power lines.

The Network also currently includes 317 active SPS (as of 30 June 2025). These units are concentrated in the regional areas of the Mid-West, Goldfields, eastern Wheatbelt and the Great Southern. SPS will continue to be rolled out in these regional areas where it is shown to be an efficient and suitable option to provide safe and reliable supply.

Figure 1 - Map of the Western Power Network

4. Overview

This section provides an overview of the challenges and factors during the 2024/25 period that impacted the reliability performance of the Network, as well as the strategies and activities being implemented by Western Power to improve the reliability of the Network.

4.1 Distribution network performance

The Perth CBD performance in the 2024/25 period met the standard of 30 minutes for average total length of interruptions (SAIDI). Overall performance was impacted by a fault at the CBD Hay Street zone substation on 19 December 2024 which affected 2,800 customers out of approximately 6,200 customers in the Perth CBD, for 10 minutes.

There was overall improvement in the performance results for all indicators in Urban Areas (other than Perth CBD) and Other Areas for the 2024/25 period.

The Network recorded the highest impact from pole top fires in the 2024/25 period since records began in 2003, and the impacts were severe and presented many challenges to Western Power field crews, as well as impacted customers.

Network performance was impacted during a number of significant weather events, as detailed below:

- 23 August 2024 - Over 20,000 customers were interrupted in the Goldfields and the Wheatbelt for an average of six and a half hours and nearly four hours respectively. The outage was caused by two trips of the 220Kv feeder line due to the activation of a stability protection device at Merredin Terminal, followed by a voltage control equipment fault at Kalgoorlie Terminal.
- 24-25 January 2025 - Nearly 92,000 customers were interrupted for an average of nearly eight hours and 30 minutes, due to pole top fires. Most of the affected customers were in the Perth Metropolitan, Great Southern and Wheatbelt regions.
- 19 February 2025 - Over 26,000 customers were without power for an average of 11 hours and 30 minutes, due to localised storm activity in the Perth Hills and surrounding areas.
- 4 March 2025 - Nearly 69,000 customers were interrupted across the network for an average of nearly six hours, due to pole top fire activity. Most of the affected customers were in the Perth Metropolitan and Peel regions.
- 13 March 2025 - Over 20,000 customers were without power for an average of three hours, due to microburst of lightning and strong winds in the Perth Hills and surrounding areas.
- 29 March 2025 - Multiple transmission line outages occurred just prior to midnight during lightning activity, blacking out the Clarkson, Wanneroo and Yanchep substations affecting nearly 73,000 customers for an average of three hours. The affected customers were in the Perth Metropolitan region.

4.2 Strategies and activities employed to maintain reliability of the network

In response to the increased number and severity of climate related events, Western Power continues to update its overall long-term Network strategies and also implement additional activities to maintain or deliver targeted improvements in the reliability of supply.

4.2.1 Routine maintenance

This activity involves Western Power's routine and targeted asset inspection, maintenance programs and monitoring of assets. It is done in conjunction with vegetation management plans, as well as the replacement of defective assets such as poles, conductors and switching equipment. The objective of routine and targeted maintenance is to minimise the public safety risk, the environmental risks, and positively influence reliability performance. Western Power adopts a risk-based approach to planning and delivering work, which aims to eliminate the maximum amount of risk from the Network, while balancing safety, reliability and affordability.

4.2.2 Network augmentation

This activity involves additional capital work, such as Network modification or installation of new assets. Specific areas may be targeted based on their long-term reliability performance and underlying reliability risk factors. The nature of augmentation will depend on the factors that negatively affect reliability and the suitability of options at that location on the Network.

Options implemented under this strategy include the following:

- Installing new interconnections between parts of the Network to facilitate the transfer of customer connections to different points on the Network (reducing supply interruption duration), as well as strengthening and extensive automation of existing interconnections to allow near instantaneous remote transfer capability.
- Replacing overhead bare conductor power lines with covered conductor or underground cables to reduce the risk of a supply interruption caused by a foreign body contacting a live electrical conductor.
- Augmenting or upgrading the distribution feeders, to ensure that there is sufficient load carrying capacity, and that the assets are in an adequate (serviceable) condition to meet customer needs.
- Investigating and utilising new technology that is expected to improve the customer experience such as microgrids, automation functions, hardware and software, SPS, portable and static generation connecting transformers (injection units), battery energy storage systems, fast communication links, protection devices, and early fault detection devices on rural feeders as part of the Regional Reliability Initiative.

4.2.3 Targeted activities

Several targeted reliability improvement activities were undertaken during the 2024/25 period:

- Temporary deployment of generators and portable connecting transformer (injection units) for selected regions for planned and unplanned work across all regions including Mandurah, Kalbarri, Quairading and Wagerup.
- Temporary islanded networks were created in Kalbarri, Mullewa, Port Denison/Dongara and Perenjori.
- Deployment of fuse saver technology to reduce sustained outages on radial spurs.
- Continuation of the Network-wide Ring Main Unit automation and motorisation program, with benefits expected to begin to be realised in the 2025/26 period.
- Network reinforcement works in five urban areas: Beechboro, Byford, Mandurah, Meadow Springs and Southern River to support growing load demand.
- Implementation of the Network reconfiguration and optimisation project to target reliability - which is forecast to be completed in September 2025 - with the benefits of this project being realised in 2025/26. The project includes conductor upgrades, installation and/or automation of ring main units,

reclosers, fuse savers, remote monitoring units and pole top switches and improving feeder interconnectivity.

- A regional reliability improvement program commenced in 2023 to undertake trials, consult with customers, implement improvements and develop a plan to improve regional reliability, using the capital allowance allocated for this purpose in AA5. A four stage Regional Reliability Initiative Implementation Plan (Plan) was developed:
 - *Stage 1 (Revised Restoration)* – Continue the application of reliability improvements from redesigned practices during the fire season in consultation with the Department of Fire and Emergency Services (**DFES**).
 - *Stage 2 (Initial Pilot Projects)* – Current stage – Pilots were initiated for four rural feeders which feed Northampton, Lancelin, Dongara/Port Denison and Gnowangerup communities. The pilots were shortlisted based on current hotspots and flashpoints, worst performing feeders, and other conditions such as environment, demographics, historic investment levels, customer minutes lost due to unplanned interruptions, design standards etc.

As part of these pilot projects, the impacted communities were consulted on the proposed options and had input into the final works.

A co-design session was held in Lancelin during September 2024 that helped the initiative explore viable options for medium to long-term solutions for Lancelin and surrounding communities (including Nilgün, Karekin and Ledge Point). The short-term solution of installing a static High Voltage Injection Unit (**HVIU**) was agreed and commissioned in November 2024, to feed the town of Lancelin in case of outages. This HVIU has been instrumental in saving 7.7 million customer minutes so far, including during 25/26 January 2025 when the network (including Lancelin) was impacted by pole top fires.

Works identified for Dongara (including Port Denison) are now in delivery in addition to silconing that has been completed.

- *Stage 3 (Next Stage Pilot Projects) - Current stage* – Informed by learnings from Stage 2, several pilots have been identified that are broadly categorised into feeder related projects and other targeted pilots that are not specific to a feeder. The feeder related projects follow a similar approach to that undertaken for Stage 2, and six additional feeders have been shortlisted

The non-feeder specific projects include targeted volumetric works that are geared up to improve reliability in regional areas. Some of these solutions include installation of Early Fault Detectors, Fuse Savers and telemetry on Voltage Regulators, along with investigating further improvements in the restoration practices.

- *Stage 4 (Handover to AA6)* – Whilst stages 2 and 3 are focused on works and pilot projects that include trials of new technology/asset solutions, Stage 4 will be focused on incorporating the learnings from these stages into AA6 and longer-term regional reliability improvements.

To allow sufficient time to deploy solutions, gather insights and begin to realise benefits under the current stages 2 and 3, the longer-term plan to improve regional reliability will be developed and shared as part of the AA6 initial proposal in February 2027.

Stakeholder and community engagement is being tailored according to each stage of the Plan and the respective communities covered in the pilot areas. The ‘felt experience approach’ will typically target localities with small customer numbers where performance has been challenged. While this approach will enhance local performance and local customer felt experience, it will not result in a significant improvement in terms of average based service standard benchmarks.

Nevertheless, these projects are important work to ensure that all communities, no matter how small, receive appropriate reliability.

Summer readiness preparations 2024

As part of regular operational practices, Western Power proactively undertakes an annual summer readiness program that is completed prior to the onset of summer to improve Network resilience and effectively manage peak demand and high heat.

While the Network is built to withstand hot, sustained extreme temperatures, fire weather conditions and/or storms can impact Network infrastructure and Western Power's ability to restore power.

The 2024 summer readiness program included the following actions:

- Information sharing with DFES.
- Eight Network feeder reinforcement projects were commenced between July and November 2024. Six of the eight projects have entered the construction phase and will be largely completed prior to summer 2025, with the remaining two projects expected to be completed prior to summer 2026 based on current Network risk.
- Over 170,000 bushfire management inspections have been completed to identify asset defects and vegetation mitigation works required to be completed, to address asset and vegetation risk in high and extreme bushfire zones prior to the commencement of the 2024 summer season. In total, over 700 distribution defects and 35,000 bush fire management vegetation cuts have been completed.
- Completed the upgrade of 48 (out of planned 75) overloaded transformers to improve Network resilience. The remaining 27 transformers are being upgraded progressively.
- There were 200 planned activities completed (inspections, minor repairs etc) to improve the Power Transformer resilience during summer.
- Employed drones to expedite fault identification during daylight, reducing recovery times.
- Pre-deployed generators to known high risk areas and maintained the fleet of 37 Emergency Response Generators (ERGs) and seven HVIUs for summer readiness. HVIUs connect several ERGs together to power a larger area than would normally be possible when only using a single generator.

During the 2024/25 period, an additional 105 SPS units were deployed across the Network, with a further 200 plus SPS units anticipated to be deployed by the end of the 2025/26 period, which will improve the customer experience in those parts of the Network.

5. Non-compliances

This section is provided in response to the requirements of item 4 of Schedule 1 of the Code.

Code extract: Item 4:

“In respect of each failure by the transmitter or distributor to comply with a provision of this Code or an instrument under Section 14(3) (as identified by monitoring records or under section 24 or following a complaint) –

- a) the total number of breaches of each provision; and*
- b) the remedial action taken in each case”.*

5.1 Code non-compliances

During the 2024/25 period there were three non-compliances with various sections of the Code:

5.1.1 Section 9

Section 9 of the Code requires Western Power, so far as is reasonably practicable, to provide customers with notice of a planned interruption 72 hours (or at the earliest practicable time) before the start of the interruption. During the 2024/25 period, Western Power provided over 880,000 notifications to customers impacted by planned interruptions, and the required notice was not provided to a small number of customers.

As detailed in Table 4, Western Power made a payment to 362 customers for not providing the required notice of a planned interruption (0.04%).

5.1.2 Section 12(3)

Section 12(3) of the Code requires Western Power to take prescribed action in the event of a significant interruption to a small use customer. As detailed in sections 6.1 and 6.2 of this report, there were instances where Western Power was non-compliant and customers experienced supply interruptions:

- lasting longer than 12 hours
- occurring more frequently than the permitted number of times.

Pole top fires, storm damage to overhead assets, equipment failure, and planned interruptions have contributed to those instances. Details are provided in Section 4.1.

5.1.3 Section 13(2)

Section 13(2) of the Code requires Western Power to perform to the prescribed standard for the average total length of interruptions (SAIDI). As detailed in section 9 of this report, the average performance over the four-year period was not within the prescribed standard for the discrete area of Perth CBD, the Urban Areas, Other Areas of the State.

The Rural Reliability Initiative to improve overall average performance has commenced and will continue over the AA5 period as detailed in section 1.3. Western Power is targeting programs where customers are experiencing the highest number of over 12-hour outages and, where practical, Western Power is including them in the SPS program.

6. Supply interruptions

This section sets out Western Power's response to item 5 of Schedule 1 of the Code.

Code extract: Item 5:

"The number of premises of small use customers the supply of electricity to which has been interrupted –
a) *for more than 12 hours continuously; or*
b) *more than the permitted number of times, as that expression is defined in section 12(1)",*
and in the case of interruptions referred to in paragraph (a), the number of interruptions and the length of each interruption.

6.1 Performance - Interruptions exceeding 12 hours

In relation to Item 5(a), there were 2,294 incidents resulting in 61,901 customer premises experiencing interruptions that exceeded 12 hours continuously, which was significantly lower than the 98,114 customers impacted in the 2023/24 period. Appendix A outlines a complete list of customer interruptions exceeding 12 hours.

The primary Network events which contributed to customer interruptions exceeding 12 hours have been set out in section 4.1.

6.2 Performance – Interruptions exceeding the permitted number of times

In relation to Item 5(b), Table 1 details the number of customers interrupted more than the number of times expressed in section 12(1) of the Code.

	2023/24	2024/25
Urban areas (including Perth CBD) customers that have been interrupted more than 9 times	10,346	8,752
Other area customers that have been interrupted more than 16 times	7,340	4,671

Table 1: Customers that have been interrupted more than the number of times expressed in section 12(1) of the Code

Customers in Urban Areas who experienced more than nine interruptions were predominantly within the Perth metropolitan region.

Customers in Other Areas who experienced more than 16 interruptions were predominantly located in the Wheatbelt and Great Southern regions.

In the 2024/25 period, customers in both the Urban areas and Other areas had a lower number of interruptions than in the 2023/24 period. These numbers change from year on year as they are heavily influenced by the intensity and impact of weather events on Network assets.

7. Customer complaints

This section sets out Western Power's response to items 6, 7 and 8 of Schedule 1.

Code extract:

Item 6: *"The total number of complaints received"*

Item 7: *"The number of complaints received from customers in each of the discrete areas"*

Item 8: *"The total amount spent by the transmitter or distributor in addressing complaints, other than by way of payment under sections 18 and 19".*

Performance – Customer complaints

Customer complaints requiring further investigation

A total of 1,051 complaints were received in relation to the requirements of the Code listed below, which required further investigation by Western Power prior to being completed:

- Section 6(2) Voltage fluctuations
- Section 7 Harmonics
- Sections (9 – 13) Reliability of supply.

Table 2 provides a breakdown of the customer complaints for the past two reporting periods, shown by each of the discrete areas. The number of complaints in 2024/25 reduced by 52.8% compared to the 2023/24 period.

Discrete area	2023/24	2024/25
Perth CBD	5	5
Urban Areas other than Perth CBD	1,076	697
Other Areas	519	342
SPS	6	7
Total	1,606	1,051

Table 2: Complaints received in 2023/24 and 2024/25 – total and by discrete area as per items 6 and 7 of Schedule 1

The total expenditure to address these complaints was \$849,985 compared to \$499,827 for the 2023/24 period. The costs vary from year to year depending on the types of complaints and whether any Network equipment needs to be replaced or upgraded to address the complaints.

Escalated customer issues resolved at first point of contact not requiring any investigation

In addition to the 1,051 complaints recorded in Table 2, a further 164 escalated issues were received from customers which were resolved at the first point of contact and did not require any further follow-up from Western Power. Table 3 provides a breakdown of the escalated customer issues resolved at first point of contact for the 2023/24 and 2024/25 periods, shown by each of the discrete areas.

Discrete area	2023/24	2024/25
Perth CBD	0	0
Urban Areas other than Perth CBD	253	126
Other Areas	88	38
SPS	0	0
Total	341	164

Table 3: Escalated customer issues received and resolved at first point of contact in 2023/24 and 2024/25 – total and by discrete area

8. Payments to customers

This section sets out Western Power's response to item 9 of Schedule 1.

Code extract: Item 9:

"The number and total amount of payments made by the transmitter or distributor under each of sections 18 and 19".

Performance – payments to customers

Table 4 below provides details of service standard payments to customers for not providing the required notification of a planned interruption in the 2023/24 and 2024/25 periods.

It also provides details of the extended outage payments made for the periods. The 28,463 claims represent customer outages which exceeded 12 hours continuously, mainly as a result of the weather events which impacted the Network during the 2024/25 period. The number of claims was significantly lower than the 2023/24 period.

	2023/24		2024/25	
	Number	Value	Number	Value
Payments for failure to give the required notice of a planned interruption *	219	\$4,380	362	\$7,240
Payments for supply interruptions exceeding 12 hours	55,502	\$10,019,720	28,463	** \$3,417,240

Table 4: Payments in 2023/24 and 2024/25 as per item 9 of Schedule 1 of the Code

** Table 5 provides a breakdown of the \$3,417,240 in claims paid during 2024/25 for extended outages exceeding 12 hours.

Amount per claim	Number of claims	Total paid	Comments
\$120	28,449	\$3,413,880	Standard payment amount for 2024/25
\$240	14	\$3,360	Increased to \$240 by Ministerial Direction
TOTAL	28,463	\$3,417,240	

Table 5: Claims paid during 2024/25 for extended outages exceeding 12 hours

* In addition to the \$7,240 paid pursuant to clause 18 of the Code, Western Power made ex gratia payments totalling \$10,860

9. Supply reliability

This section sets out Western Power’s response to items 11, 12 and 13 of Schedule 1.

Code extract: Item 11

“For each discrete area –

- a) the average length of interruption of supply to customer premises expressed in minutes [CAIDI];*
- b) the average number of interruptions of supply to customer premises [SAIFI];*
- c) the average percentage of time that electricity has been supplied to customer premises [ASAI]; and*
- d) the average total length of all interruptions of supply to customer premises expressed in minutes [SAIDI].”*

Code extract: Item 12

“The information published for each paragraph of item 11 in respect of each of the 3 years ending 30 June preceding the year to which the report relates.”

Code extract: Item 13

“For each paragraph of item 11, the average of the 4 amounts under that paragraph in respect of the years comprising –

- a) the year to which the report relates; and*
- b) the 3 years referred to in item 12.”*

Part 2, Division 3, Sections 13(2) and 13(3) set out the prescribed standards for the average total length of interruptions of supply for particular areas.

Code extract:

Subsection 13(2) “A transmitter or distributor must, so far as is reasonably practicable, ensure that for customer premises in an area referred to in the first column of the Table to this subsection the average total length of interruptions of supply, as calculated under subsection (3), does not exceed the number of minutes specified in the second column opposite the reference to that area.

Area	Standard for average total length of interruptions in minutes
<i>the Perth CBD</i>	<i>30</i>
<i>the Urban Areas other than the Perth CBD</i>	<i>160</i>
<i>any Other area of the State</i>	<i>290</i>

Subsection 13(3)“ For the purposes of subsection (2), the average total length of interruptions of supply is to be calculated as at 30 June in each year –

- a) by taking the average total length, in minutes, of interruptions of supply to customer premises in an area during each year of the period of 4 years ending on that day; and*
- b) by then taking the average of the 4 annual figures determined under paragraph (a)“*

Tables 6 to 9 show the SAIDI, SAIFI, CAIDI and ASAI performance over the past four years ending 30 June each year, including the four-year average, for the discrete areas of:

- Perth CBD.
- Urban Areas other than Perth CBD.
- Other Areas.
- SPS.

9.1 Performance – Perth CBD

The Perth CBD 4-year average SAIDI performance is shown in Table 6. Performance for the 2024/25 period improved for all indicators, compared to the 2023/24 period.

Financial Year ended 30 June						4 Year Average
KPI	Units	2021/22	2022/23	2023/24	2024/25	
SAIDI	minutes per year	47	49	84	30	52
SAIFI	interruptions per year	0.48	0.34	0.80	0.77	0.60
CAIDI	minutes per interruption	99	145	105	38	97
ASAI	% availability per year	99.991	99.991	99.984	99.994	99.990

Table 6: Perth CBD area reliability

9.2 Performance – Urban Areas other than Perth CBD

The *Urban Areas other than Perth CBD* average SAIDI performance is shown in Table 7. Performance for the 2024/25 period improved for all indicators, compared to the 2023/24 period, with the exception of SAIFI. Refer to section 4.1 for further details.

Financial Year Ended 30 June						4 Year Average
KPI	Units	2021/22	2022/23	2023/24	2024/25	
SAIDI	Minutes per year	337	287	370	338	333
SAIFI	Interruptions per year	2.23	2.02	2.11	2.24	2.15
CAIDI	Minutes per interruption	151	142	175	151	155
ASAI	% availability per year	99.936	99.945	99.930	99.936	99.937

Table 7: Urban Areas other than Perth CBD reliability

9.3 Performance – Other Areas

The *Other Areas* average SAIDI performance is shown in Table 8. Performance for the 2024/25 period improved for all indicators, compared to the 2023/24 period, with the exception of CAIDI which was the same as the previous period.

Financial Year Ended 30 June						4 Year Average
KPI	Units	2021/22	2022/23	2023/24	2024/25	
SAIDI	Minutes per year	1,077	718	1,339	1,025	1,040
SAIFI	Interruptions per year	5.54	4.99	7.00	5.36	5.72
CAIDI	Minutes per interruption	194	144	191	191	180
ASAI	% availability per year	99.795	99.863	99.745	99.805	99.802

Table 8: Other Areas reliability

9.4 Performance – SPS

The SPS performance for 2024/25 shown in Table 9 now reflects the four-year average for the discrete area of SPS. SAIDI performance shown in Table 9 was within the standard of 290 minutes.

Western Power expects customer reliability experience to improve, through the following planned improvements, which over time may be better captured by different reliability indicators:

- Increased deployment of Advanced Metering Infrastructure (AMI) to provide enhanced customer usage data to enable improved SPS sizing accuracy, thereby reducing the likelihood of supply interruptions.
- Technical enhancements including the ability to remotely reset SPS units to allow power to be restored faster where possible during a fault.

There were 317 active SPS as at 30 June 2025.

Financial Year Ended 30 June						4 Year Average
KPI	Units	2021/22	2022/23	2023/24	2024/25	
SAIDI	Minutes per year	39	409	284	262	248
SAIFI	Interruptions per year	0.14	0.53	0.72	0.88	0.57
CAIDI	Minutes per interruption	285	769	397	299	438
ASAI	% availability per year	99.993	99.922	99.950	99.949	99.953

Table 9: SPS reliability

Appendix A

List of customer
interruptions exceeding 12
hours

A.1 List of customer interruptions exceeding 12 hours

As per section 6 of this report, the list below provides details of interruptions exceeding 12 hours, including the length of the interruption and the number of customers affected. Western Power endeavored to minimise the duration of all interruptions and the list below highlights (*) those interruptions where progressive restoration of customer supplies was possible through switching and reconfiguration of the Network prior to full restoration.

Interruption	First restoration after 12 hours	Final restoration after 12 hours	Customers
1	21 hours, 23 minutes	21 hours, 23 minutes	1
2	15 hours, 55 minutes	15 hours, 55 minutes	44
3	12 hours, 45 minutes	12 hours, 45 minutes	1
